Parenting experiences of living with a child with attention deficit hyperactivity disorder: a systematic review of qualitative evidence protocol

Britt Laugesen; Mette Grønkjær

The JBI Database of Systematic Reviews and Implementation Reports (2015)

The objective of the systematic review is to identify and synthesize the best available evidence on how parents experience living with a child with attention deficit hyperactivity disorder (ADHD) including their experiences of ADHD health care services.

The review questions are:

· How does living with a child with ADHD affect family life?

· What are the parental challenges of having a child with ADHD?

How do parents experience collaboration with health care settings and professionals?
